

ABSTRACT OF THE DISCLOSURE

A material for dielectric films is a polymerizable composition containing an adamantane polycarboxylic acid represented by following Formula (1):

wherein X is a hydrogen atom, a carboxyl group or a hydrocarbon group; and Y¹, Y², Y³ and Y⁴ are the same as or different from one another and are each a single bond or a bivalent aromatic cyclic group; an aromatic polyamine represented by following Formula (2):

wherein Ring Z is a monocyclic or polycyclic aromatic ring; and R¹ and R² are each a substituent bound to Ring Z, are the same as or different from each other and are each an amino group, a mono-substituted amino group, a hydroxyl group or a mercapto group; and a solvent other than ketones and aldehydes, in which the adamantane polycarboxylic acid and aromatic polyamine are

dissolved in the solvent.
